

Think Automation and beyond...

# The New MicroSmart PLC Family

"The features and adaptability of MicroSmart PLCs make them my first choice for applications now and in the future!" – Project Manager

# The Power to Control. Anywhere. Anytime.

### Power, Performance, Connectivity

Maximize efficiency and cut development time! MicroSmart PLCs combine advanced networking capabilities with unparalleled power, performance and connectivity. Designed to meet all your communication requirements, now and in the future, MicroSmart Pentra PLCs give you the flexibility to expand your system with as many as fifteen modules! Our new Embedded Ethernet PLC with built-in Modbus TCP also lets you monitor status in real-time, receive email alerts and customize your own web page.

### Safety

All MicroSmart PLCs (FC4A and FC5A) meet the highest standards for safety including: cULus listed, CE compliant, as well as certified for marine use by ABS (American Bureau of Shipping), DNV (Det Norskes Veritas), GL (Germanischer Lloyd) and LR (Lloyd's Register of Shipping).\*

\*Note: The following products are pending approval for UL, ABS, DNV and Lloyd's Registry FC5A-D12\*, FC4A-K4A1, FC4A-PM128, FC5A-F2M2, FC5A-F2MR2, FC5A-SIF2, FC5A-SIF4, FC5A-C\*\*R2D, FC5A-EXM\*, FC4A-SX5ES\*, FC4A-AS62M, and FC4A-N08A11. DDEC

Setting the standards for automation...again

### The MicroSmart Pentra PLC Family: Everything you need in a controller

Embedded Ethernet Port

Modbus TCP, RTU and ASCII

User web page

USB programming port

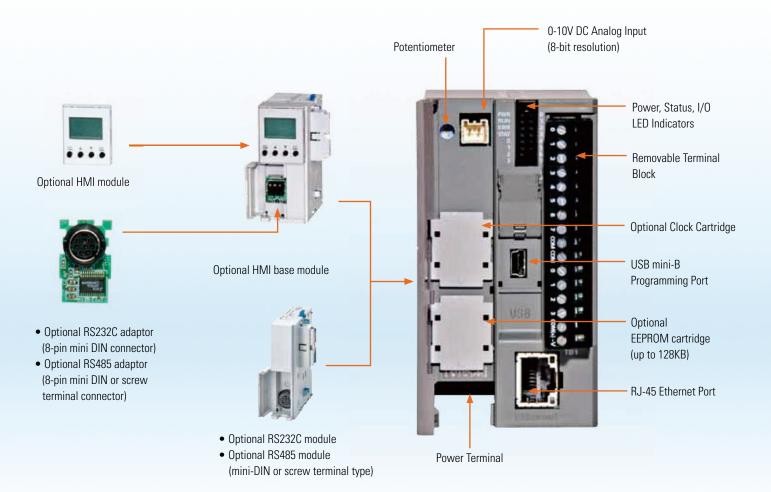

Email and text notifications

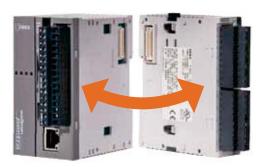

NEW 4-pt. analog output module

# A CPU for every application

With three controller types to choose from, MicroSmart Pentra PLCs offer the features you need for your applications. Built to allow you the flexibility to expand when you need to, MicroSmart Pentra PLCs are the best way to get everything you need in just one controller.

Note: For a comparison of FC5A and FC4A functions, see CPU Highlights on pages 22 and 23.

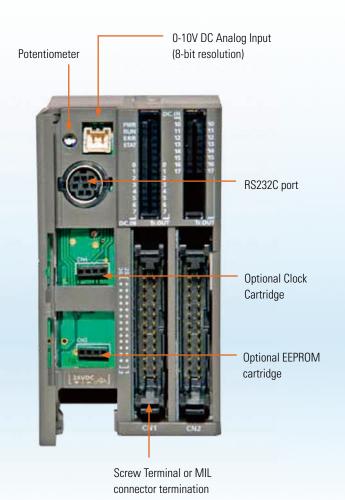

Modules snap together easily without the need for additional tools.

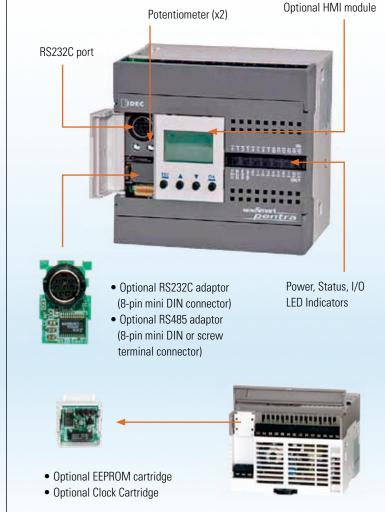

### **Slim CPU with Ethernet Port**

The perfect design when you need Ethernet capability, this slim CPU with embedded Ethernet port is available with 24V DC power and equipped with eight DC inputs and four transistor outputs (sink or source). Up to seven functional modules, including analog and communication modules can be mounted on the right-hand expansion bus. Using an expansion interface module, an additional eight discrete expansion modules can be mounted.

# Slim CPU

If you don't need Ethernet, but still want a high-performance CPU, the MicroSmart Pentra slim CPU is your best choice! Available with 24V DC power, this controller has all the functionalities you need in 16 and 32 I/O configurations. Each 16 I/O CPU is equipped with eight DC inputs, two transistor outputs (sink or source) and six relay outputs, while the 32 I/O CPU is equipped with 16 DC inputs and 16 transistor outputs (sink or source).

# All-in-One CPU

Available with 12V DC, 24V DC and 100-240V AC power, you can choose from 10, 16 and 24 I/O configurations. The 10 I/O CPU is equipped with six DC inputs and four relay outputs, while the 16 I/O CPU is equipped with nine DC inputs and seven relay outputs. The 24 I/O CPU is equipped with 14 DC inputs and ten relay outputs. The 24 I/O CPU (24V DC and 100-240V AC models) can also be expanded with a maximum of four functional or discreet expansion modules.

# **Communicate with Modbus Protocol**

Modbus is a communications protocol, which over the years has become a standard in the automation industry. The main reasons for the extensive use of Modbus over other communications protocols are because it is:

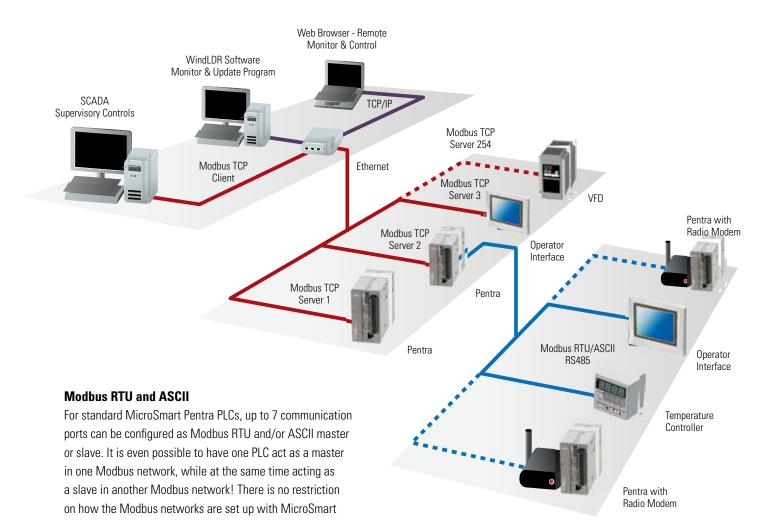

- 1. Openly published and royalty-free
- 2. A relatively easy industrial network to deploy
- 3. Able to move raw bits or word data without placing many restrictions on vendors

Modbus is often used to connect a supervisory computer with a remote terminal unit (RTU) in supervisory control and data acquisition (SCADA) systems. All IDEC MicroSmart Pentra PLCs support Modbus protocol.

Using intuitive WindLDR software, you can configure the MicroSmart Pentra to be a Master or Slave device on a Modbus network. All MicroSmart Pentra PLCs support Modbus RTU/ASCII protocols and our CPU with embedded Ethernet port also supports Modbus TCP protocol.

# **Modbus Connectivity with TCP, RTU and ASCII**

### Modbus TCP

Pentra PLCs.

MicroSmart Pentra PLCs with embedded Ethernet port support Modbus TCP Client (Master) or Server (Slave) communications. When the MircroSmart Pentra is configured as a client (master) on the Modbus TCP network, up to 3 connections can be established. Each master can send up to 255 requests to the slaves. On top of that, you can make connections to the PLC using WindLDR software for program monitoring, upload or download. You can also use a web browser for remote access to the PLC, even though the Ethernet port is already configured for Modbus TCP connections.

"Seamless communication between all my devices is a big deal. And it doesn't get easier than with a Pentra controller!" – System Integrator

# Built-in Ethernet for fast, reliable connectivity

Ethernet is the fastest growing segment of industrial networking, allowing reliable access-from-anywhere capability and easy remote-data archiving. It makes sense: you can't always be in the same location as your machinery, but with IDEC MicroSmart Pentra PLCs, you don't need to be. Now you can monitor status in real-time, receive email alerts and customize your own web pages.

**MicroSmart Pentra PLC with embedded Ethernet** With an easy-to-configure, built-in Ethernet port, you can set up your systems for remote access in no time.

### **Remote Access and Control**

With this latest model, you can configure the MicroSmart Pentra PLC for remote monitoring and control. Using WindLDR software, you can remotely monitor or update the PLC programs without having to be near the PLC.

### **Web Server Functions**

Using standard web browsers like Internet Explorer or Firefox, you can remotely log-in and access web pages that are stored directly on the MicroSmart Pentra PLC. Up to 1 MB of memory is dedicated for web page storage! Use the built-in web pages or create your own using an HTML editor.

### **Ping Functions**

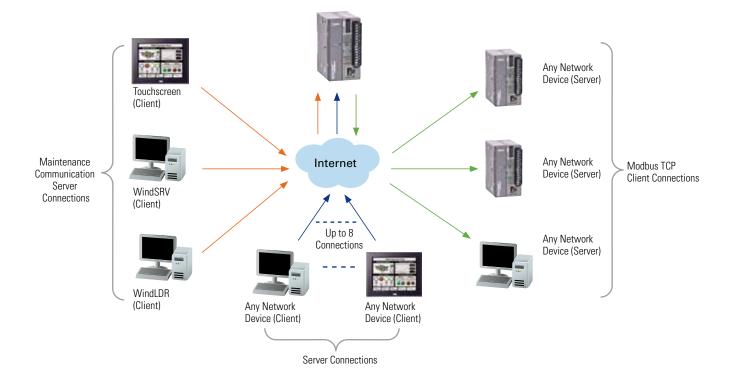

A new PING instruction, available in the MicroSmart Pentra PLCs with embedded Ethernet, allows the PLC to ping other PLCs or devices on a network to verify if that device is active or offline. It's a great way to make sure all your systems are working.

### **Instant Email and Text Alerts**

Never have to worry that you will be out of touch with your control system. MicroSmart Pentra PLCs have the ability to send email or text messages to your inbox and mobile phone. You can instantly be notified if any abnormal conditions occur. Or simply have the PLC configure and send daily operational status updates. Not only can static information with up to 1,500 characters (1 byte per character) be sent in one message, but data register values can be incorporated as well.

A new EMAIL instruction is now available in WindLDR software. You can program as many EMAIL instructions as you prefer as long as you don't exceed the programming memory capacity. A total of 255 email messages can be configured in each PLC. Each email message can be sent to multiple recipients. That means you can have as many people receive the email as required! MicroSmart Pentra PLCs also support email login authentication, which requires each sender to be verified by a username and password.

### **Up to 14 Simultaneous Connections**

Using Maintenance Communication Server connections, up to 3 Client devices, such as an operator interface, WindLDR software and SCADA OPC server such as WindSRV (KepServerEx), can simultaneously communicate with your MicroSmart Pentra PLC. Using Server Connections, an additional 8 connections can be established and each connection can be defined as Maintenance, User Communication or Modbus TCP server protocol. On top of that, another 3 connections can be configured as Modbus TCP client protocol, with a maximum of 255 requests. Each request can be for different slave devices with different IP addresses on the network.

<i>www.id</i> _0.0	,0111

# **Customize critical data for quick online monitoring**

Using the MicroSmart Pentra PLC with embedded Ethernet, you have the ability to design and create your own web page. Using a standard web browser, such as Internet Explorer or Firefox, critical information in the PLC can be accessed and controlled remotely over the web. Up to 1MB of memory is reserved for web server functions.

With your web page, data is easy to access and read. Your web page can display important parameters such as flow

rate, pressure, temperature, speed etc. of your system. These parameters can then be remotely monitored and updated. Need to change and update set points, no problem!

Using any standard HTML editor; design and create your own web pages and then import these files to the WindLDR software. WindLDR will download the HTML files to the embedded Ethernet MicroSmart Pentra CPU. It's that simple! Design it the way you want.

"With MicroSmart Pentra, I can check on our assembly lines right from the office, no matter where they're located. Makes my life a whole lot easier!" – Product Manager

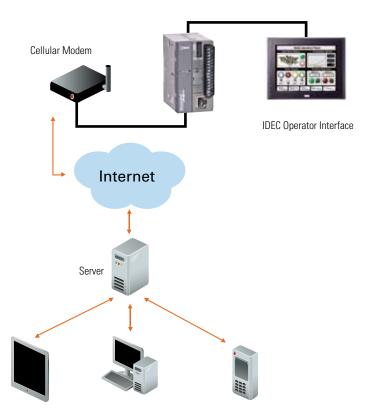

# Cellular modems let you connect anywhere

If your system is located in a remote, unpopulated area where a simple internet connection isn't available, monitoring equipment spread across a large geographic region can be difficult. Usually someone must drive to each location to manually monitor critical information, which is both time consuming and costly. So what do you do if an internet connection isn't available where your system is installed? A GSM/CDMA wireless modem lets you access your system remotely through mobile carriers in the GSM/CDMA network.

MicroSmart Pentra PLCs have been installed in various applications where they provide seamless communications through a third party GSM/CDMA cellular modem and its network. Data can then be streamed from the PLC to your servers or central office. Critical information can be remotely accessed 24/7, even in systems deployed in remote and unpopulated areas where internet service is not accessible.

- Reliable cellular connections
- 24/7 monitoring
- Alarms and system status alerts
- Remote updating for PLC programs

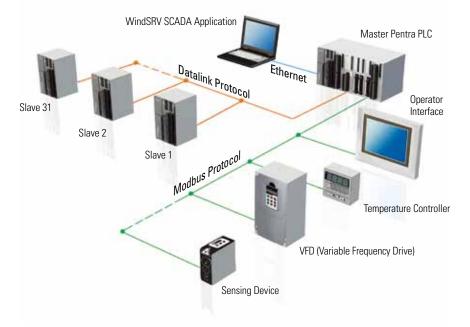

# Connect your devices by expanding to 7 ports

Just imagine all the possibilities you will experience with the flexibility of a powerful MicroSmart Pentra Slim PLC. You can configure and seamlessly communicate with as many as 7 serial devices via RS232C or RS485. MicroSmart Pentra PLCs are the only micro PLC in the market to combine so much power and flexibility in one controller.

### **Communicate to any device**

With MicroSmart Pentra PLCs, you don't have to worry about limited communication capabilities. It doesn't matter if you're just starting out or a current user expanding your MicroSmart Pentra PLC, you can rest assured that these communication modules will provide reliable and seamless communication. If RS485 modules are used for all six ports (one RS485 communication module and five SIF4 modules), up to 186 RS485 slave devices can be connected with as high as a 115K baud rate available for fast transmission.

### **Multiple networks of Modbus protocols**

IDEC MicroSmart PLCs can support Modbus communication protocol and each of the seven communication ports support Modbus protocol. You can configure one port to talk Modbus RTU master, another port for Modbus RTU slave, and more.

### Network thousands of I/Os

Using IDEC Datalink and/or Modbus protocol, you can configure tens of thousands of I/Os with one MicroSmart Pentra PLC.

### Setting the Standards for Performance

# **Boost the speed** of productivity

The success of your system might be dependent on a few milliseconds. Many micro controllers lack the necessary tools for accuracy at any speed, much less at the high speeds modern applications require. MicroSmart PLCs have always had the capability to operate high speed inputs and outputs, but MicroSmart Pentra PLCs can go even faster, up to 100kHz – and so can your productivity.

### **High-speed inputs**

- Four high-speed inputs with a maximum frequency of 100kHz
- Supports single/dual phase inputs for rotary encoders
- 32-bit counting range up to 4,294,967,295 pulses
- Integrated Functions
  - Execute Interrupt Programs
  - Frequency Measurement
  - High Speed Counter Refresh
  - Multi Stage Comparison

### **High-speed outputs**

Configure as many as three high speed pulse outputs, up to 100kHz, and get the simple control you want for stepper or servo motors.

# **Connect up to 56 analog devices**

Process controls play an important part in industrial machines. Analog signals such as pressure transducers, float switches, flow meters, valves, temperature, analog sensors and more, need to be correctly analyzed and controlled. MicroSmart Pentra PLCs offer a wide range of solutions, including 0-10V DC, 4-20mA, resistance thermometer, thermistor and thermocouple inputs, and -10 to 10V DC and 4-20mA outputs. Analog modules are available in 12 or 16-bit resolution, providing a precise reading and fast throughput.

### Expand to 56 Analog I/O

7 analog I/O expansion modules can be configured on MicroSmart Pentra PLCs. That's a total of 56 analog channels that you can utilize!

Part Number	I/O Points	Input	Output	Resolution
FC4A-J8C1	8 (8 inputs)	0-10 VDC, 4-20 mA	-	16-bit (0-50,000)
FC4A-L03A1	3 (2 inputs, 1output)		0-10 VDC, 4-20 mA	12-bit (0-4095)
FC4A-J2A1	2 (2 inputs)		-	
FC4A-J4CN1	4 (4 inputs)	0-10 VDC, 4-20 mA, RTD, Thermocouple	-	16-bit (0-50,000)
FC4A-L03AP1	3 (2 inputs, 1output)	RTD, Thermocouple	0-10 VDC, 4-20 mA	12-bit (0-4095)
FC4A-J8AT1	8 (8 inputs)	Thermistor (NTC/PTC)	-	12-bit (0-4000)
FC4A-K4A1	4 (4 outputs)	-	0-10 VDC, 4-20 mA	12-bit (0-4095)
FC4A-K2C1	2 (2 outputs)		-10 to 10 VDC, 4-20 mA	16-bit (0-50,000)
FC4A-K1A1	1 (1 output)		0-10 VDC, 4-20 mA	12-bit (0-4095)

Choose from a wide range of available modules.

### **Revolutionary universal input module**

IDEC also offers a universal analog input module. This 4-pt universal analog input module can accept any of the following types of analog signals: 4-20mA, 0-10V DC, resistance thermometer and type J, K or T thermocouple!

### Easy to configure and scale

Setting up analog modules in your PLC system should not be a challenge. Using our analog setting macro instruction in WindLDR software, you can easily set up and scale your analog signals in no time at all.

Modules are easy to configure using WindLDR software.

# **Advanced PID for precision control**

PID (Proportional Integral Derivative) is the most commonly used feedback control loop in industrial control systems. PID calculates an error value as the difference between a measured process variable and a desired set point. The controller then attempts to minimize the error by adjusting the process control. With MicroSmart Pentra PLCs, PID implementation can be deployed in two ways: integrated PID controls or a dedicated Process Control module, which can be mounted on the MicroSmart Pentra expansion bus.

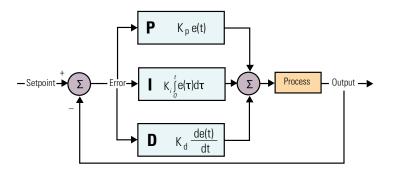

### **Integrated PID Controls**

Using built-in PID functions in the MicroSmart Pentra PLCs, and in conjunction with analog I/O expansion modules, a maximum of 56 PID loops can be programmed. A PID Macro instruction in WindLDR software is also available to guide you through the process of setting up and tuning the P, I and D parameters. You can also select from various control modes including Auto-tuning, Advanced Auto-tuning or Manual.

### **Advanced PID Module**

A dedicated PID module is available for extreme stability and complex applications. This particular module has more functionalities than you will find in any other controller on the market. Independent of CPU scan time, the PID Control module does the work, reducing PLC scan time without taking up PLC memory space.

### **PID Module Highlights:**

- Precise, stable and accurate PID control with less than a 0.2% error
- Available in two models:
  - Built-in 2 analog inputs, 2 x 4-20mA/ non-contact voltage for SSR drive
  - Built-in 2 analog inputs, 2 x relay outputs
- Each input individually configured to accept different signal types
- Up to seven modules can be mounted on the MicroSmart Pentra
- Maximum 14 PID loops with auto-tuning
- 14-bit resolution

- ARW (anti-reset windup)
- Accepts many different input types including:
  - Type K, J, R, S, B, E, T, C, PL-II and N thermocouples
  - Resistance thermometer
  - 0-20mA and 4-20mA
- 0-1V, 0-5V, 1-5V, and 0-10V DC
  Numerous control methods including:
  - Cascade
  - External set point
  - Heating and cooling control action
  - Difference input control

# Solar ready 12V DC models

With abundant features and unparalleled performance, 12V DC MicroSmart Pentra PLCs are the perfect choice for solar applications, including traffic signs, light controls, road sign controls, remote pumping and injection systems for oil and gas industries, remote water pumping stations and solar tracking systems. For mobile applications, these PLCs can be employed in utility vehicles such as cement mixers, lift controls for the handicapped, lighting and even designation signs for vans and buses.

"12V DC MicroSmart controllers are compact enough to fit in a tight space, while providing the controls I need." – Engineer MAXIMUM

WHEN

# <image>

# Meets rigorous maritime standards

FC5A/FC4A series PLCs are one of the few PLCs in the market approved for maritime applications. Our PLCs are widely used in both marine and offshore applications.

We are dedicated to ensuring the safety of life and property at sea. Our FC5A/FC4A series PLCs are trusted and approved by leading maritime classification agencies, such as ABS (American Bureau of Shipping), DNV (Det Norskes Veritas), GL (Germanischer Lloyd) and LR (Lloyd's Register of Shipping).

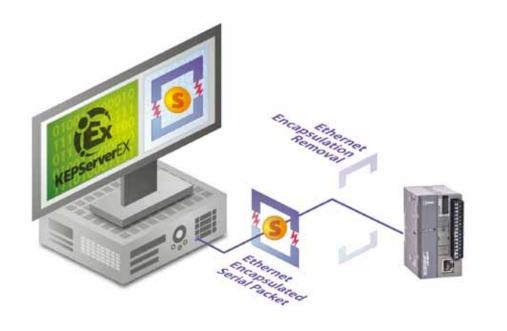

MicroSmart Pentra PLCs are the perfect solution for all your maritime applications! The MicroSmart Pentra PLC combines power and ease-of-use to give you a simple and flexible programming concept that can be tailored to your specific application.

Note: The following part numbers are pending approval from ABS, DNV and Llyod's FC5A-D12\* FC4A-K4A1, FC5A-F2M2, FC5A-F2MR2, FC5A-SIF2, FC5A-SIF4, FC5A-C\*\*R2D, FC5A-EXM\*, FC4A-SX5ES\*, FC4A-AS62M, FC4A-N08A11.

# A fast and flawless OPC solution

Want your control systems centralized, easy-to-manage and able to take advantage of the components you already have? WindSRV, also known as KEPServerEX, is an OPC server that provides direct connectivity between client applications and IDEC MicroSmart Pentra PLCs. It's a true plug-and-play OPC Server with effortless data management, acquisition, monitoring and control. Plus it supports complete addressing, including 32-bit data and floating point data.

### Industrial strength, easy to use OPC Server

The intuitive interface makes connecting IDEC MicroSmart Pentra PLCs so easy that within minutes you can be providing data to your application. KEPServerEX maximizes the promise of OPC through the use of a single server interface, ensuring:

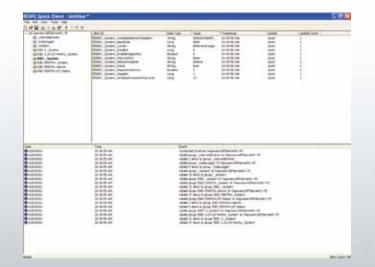

- Shorter product learning curves
- Reduced system training and maintenance costs
- Improved network reliability

### **Control at your fingertips**

A maximum of 100 MicroSmart/MicroSmart Pentra PLCs can be connected. Imagine having the ability to centrally monitor and control your whole plant, at your fingertips.

### **Quick Client**

Using Quick Client, you can access all data available to the server application, including System, Diagnostic- and User-defined tags. After you've created a simple KEPServerEX project, auto launch Quick Client from the server toolbar to test your device connection.

# Fastest micro PLC in its class

### **Fast Processing Speed**

MicroSmart Pentra Slim CPU is the fastest PLC in its class. In fact, the overall processing speed of our new Logic Engine CPU is 16 times faster than our competitor's average controller for simple instruction execution, and more than 14 times faster when executing advanced instruction sets.

### **USB** maintenance port

The new MicroSmart Pentra PLC with an embedded Ethernet PLC port also has an embedded mini-B USB port for maintenance. You can now easily connect your PC to this PLC using a standard USB cable.

### **Expanded Memory**

You won't run out of program memory space with our MicroSmart Pentra PLCs. The slim type CPU supports up to 62K bytes (10,400 steps) of programming memory. And if that's still not enough for your applications, a new optional memory cartridge for the embedded Ethernet PLC is now available with 128K bytes (21,300 ladder steps). MicroSmart Pentra is also equipped with:

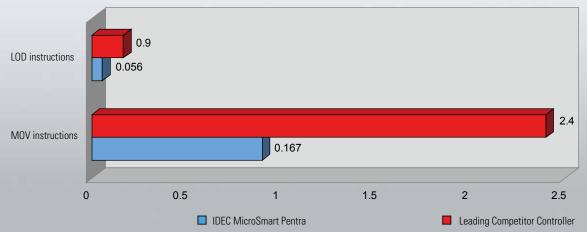

- 48,000 Data Registers
- 2,048 Internal Relays
- 256 Timers
- 256 Counters

### **FREE Upgradeable Firmware**

MicroSmart Pentra PLCs can keep up with your always expanding applications. This is thanks to field upgradeable firmware that allows you to upgrade and download system firmware as needed. And you never have to worry new features and functions won't be compatible with your MicroSmart Pentra PLC. The newest firmware is always available when you download our most recent version of Automation Organizer suite. Upgrades are always free to our users.

### **Comments and Tags download**

With up to 128K bytes of programming memory, you are free to load as much information into the PLC as you like. All comments and tag identification can be downloaded and will reside in the PLC for better understanding and clarification. No other micro PLC can offer this much programming memory and more importantly, flexibility.

### MicroSmart Pentra Slim CPU Speed Comparison (µsecs)

# Automation Organizer lets you design, debug and document

Automation Organizer (AO) is a powerful software suite containing PLC programming software (WindLDR), operator interface configuration software (WindO/I-NV2) and system configuration software (WindCFG). AO boasts a completely new graphic user interface and redesigned menu icons. AO is a one-stop automation software package for IDEC MicroSmart Pentra PLCs and IDEC operator interfaces, and is compatible with Windows XP, Vista (32 bit) and Windows 7 (32 and 64-bit).

### **FREE Upgrades**

The Automation Organizer suite comes with free lifetime upgrades. Once you make the initial purchase, upgrades are absolutely free. "AO just makes sense. It's the little things like a common tag name database for both my PLC and HMI controls." - Engineer

All IDEC MicroSmart Pentra PLCs are programmable with WindLDR ladder logic software. This icon-driven programming tool combines logic and intuition with an incredibly easy-to-use interface to allow you to take advantage of MicroSmart features. Even without ladder program experience, you can use the built-in editors, shortcuts and debuggers to configure programs. WindLDR is an excellent, long-term investment for your control solutions.

### • Simulation Mode

WindLDR allows you to simulate ladder programs with built-in Simulation mode. You can easily test and verify functionality of your ladder program without actual hardware.

### • Online Editing

Shutting down your PLC for minor changes can be a major hassle, so WindLDR allows you to edit and download programs without interrupting PLC operation. You can write new values to counters, timers and registers at any time without switching between editor mode (for programming) and monitor mode.

### Firmware Download

With WindLDR version 6.4 or later, you have the option to upgrade or downgrade your CPU system program. It's as simple as clicking on the checkbox in the Download dialog box. Now you can easily update your PLC system firmware with the click of a button.

### Automation Organizer Wind0/I-NV2

WindO/I-NV2 software is the programming tool available for all IDEC operator interfaces. It is used to create projects or programs that can display information from a PLC, process status, or can be used to input data with virtual switches or keypads to make changes to a process. The objects are extremely easy to configure with the help of step-by-step navigation. It lets you quickly create colorful graphical screens in no time using drop-down menus and intuitive drag and drop functionality for the objects. A workspace is available to help you organize and manage projects, objects and screens.

### Automation Organizer WindCFG

WindCFG is a system layout and configuration tool for IDEC PLCs and operator interfaces. Using WindCFG, you can create a visual layout of the system design and basic configuration of your PLC and operator interfaces.

### **CPU Highlights**

No matter your application, FC5A and FC4A have the features you need!

### **MicroSmart PLC Specifications and Technical Data**

High-performance quality programmable logic controller with world-class processing speed. Compact body packed with outstanding features. New slim type CPU module available with web server function, ideal for remote control. (FC5A-D12\*1E)

- New FC5A slim type modules available with web server function, send email function, n:n communication by Modbus communication, PING function. Supports user web page. (FC5A-D12\*1E)
- Equipped with a USB port (mini-B) and Ethernet port for easy maintenance, remote control and monitoring. (FC5A-D12\*1E)
- World-class processing speed.
- Logic Engine performance:
  - Basic instruction LOD 0.056 µs
  - Advanced instruction MOV 0.167 µs (FC5A slim type only)
- Equipped with Modbus ASCII/RTU master/slave function (FC5A).
- FC5A slim type expandable up to 512 I/O points (when expansion interface modules are used).
- Full line up of analog modules including 4-point analog output module.
- FC5A PID module with high accuracy and high functionality available.

### Expansion Serial Communication Module

• General Specifications (Expansion RS232C Communication Module)

Type No.	FC5A-SIF2
No. of Port	1
Synchronization	Synchronization Start-stop synchronization
Electrical Characteristics	Electrical Characteristics EIA RS232C compliant
Maximum Delay in One Scan	Approx. 4 ms
Operating Temperature	0 to 55°C
Relative Humidity	10 to 95% (no condensation)
Recommended Cable Specifications	Shielded multi-core cable: 24AWG x 6 Dielectric strength: 2,000V AC/min Insulation resistance: 100 MΩ/km
Recommended Cable	KIDU-SB 24 AWG×6C (Nihon Electric Wire & Cable)
Connector on Mother Board	MC1.5/10-G-3.81BK (Phoenix Contact) Applicable terminal block: FC4A-PMT10P
Connector Insertion/Removal Durability	100 times minimum
Isolation from Internal Circuit	Transformer isolated
Quantity of Applicable Expansion RS232C Communication Modules	All-in-One 24-I/O type CPU module: 3 maximum *1 Slim type CPU module: 5 maximum
Internal Current Draw	40 mA (5V/24V DC) *5
Weight	100g

Note: FC5A-SIF2 cannot be connected to FC4A CPU modules.

\*1: FC5A All-in-One 24-I/O CPU module cannot use the FC5A-SIF2/SIF4 module in combination with the function modules listed in the table on the left. When using these modules in combination with the FC5A-SIF2/SIF4 module, use the slim type CPU module.

Function Modules	Type No.
Analog Modules	FC4A-L03A1, FC4A-L03AP1, FC4A-J2A1, FC4A-K1A1, FC4A-J4CN1, FC4A-J8C1, FC4A-J8AT1, FC4A-K2C1, FC4A-K4A1
AS-Interface Master Module	FC4A-AS62M

\*5: 85 mA (5V DC), 0 mA (24V DC) when the communication module version is lower than V200.

### • HMI Module Specifications

Type No.		FC4A-PH1			
Power Voltage	5V DC (supplied fr	om the CPU module)			
Weight	20g				
<ul> <li>Memory Cartridge Sp</li> </ul>	ecifications				
Type No.	FC4A-PM32	FC4A-PM64 *6	FC4A-PM128 *6		
Memory Type	EEPROM				
Accessible Memory Capacity	32 KB	64 KB	128 KB		
Hardware for Storing Data	CPU Module				
Software for Storing Data	WindLDR				
Quantity of Stored Programs	One user program	WindLDK One user program can be stored on one memory cartridge			

\*6: Even when using a large-capacity memory cartridge, the program capacity of the CPU module takes effect, except when using FC4A-D20RK1, FC4A-D20RS1, FC4A-D40K3, and FC4A-D40S3 CPU modules, the program capacity expands to 64KB.

### Clock Cartridge Specifications

Type No.	FC4A-PT1
Accuracy	±30 sec/month (typical) at 25°C
Backup Duration	Approx. 30 days (typical) at 25°C after backup battery fully charged
Battery	Lithium secondary battery
Charging Time	Approx. 10 hours for charging from 0% to 90% of full charge
Replaceability	Not possible to replace battery

### (Expansion RS485 Communication Module)

Type No.	FC5A-SIF4
No. of Port	1
Synchronization	Synchronization Start-stop synchronization
Electrical Characteristics	Electrical Characteristics EIA RS485 compliant
Maximum Baud Rate	115,200 bps
Operating Temperature	0 to 55°C
Relative Humidity	10 to 95% (no condensation)
Recommended Cable Specifications	Shielded twisted pair cable: 22 AWG (0.3 mm <sup>2</sup> x 2P) Conductor Resistance: 67 MΩ/km maximum (at 20°C)
Connector on Mother Board	MC1.5/10-G-3.81BK (Phoenix Contact) Applicable terminal block: FC4A-PMT10P
Connector Insertion/ Removal Durability	100 times minimum
Isolation from Internal Circuit	Transformer isolated
Quantity of Applicable Expansion RS485C Communication Modules	All-in-One 24-1/O type CPU module: 3 maximum *1 Slim type CPU module: 5 maximum
Internal Current Draw	40 mA (5V/24V DC)
Weight	100g

Note: FC5A-SIF4 cannot be connected to FC4A CPU modules.

### • Communication Specifications

Type No.	FC5A-SIF2 FC5A-SIF4		
Maximum Baud Rate	1,200/2,400/4,800/9,600/19,200/38,400/57,600 (*4)/115,200 (*4)		
Maintenance Communication	Possible *2		
Modbus Communication	Modbus ASCII master Modbus ASCII slave Modbus RTU master Modbus RTU slave		
Data Link	-	0 *3	
Max Cable Length	10m	1,200m	
Quantity of Slave Stations	1	31	

\*2: Run-time program download is not possible.

\*3: Data Link can be used only on one of the communication ports.

\*4: Can be used when the communication module is version V200 or higher.

Resistance	Recommended Cable for Noise Immunity	Twisted pair shielded cable					
	Crosstalk	2 LSB maximum		1			

#### •Analog Input Specifications (1) (Continued)

Type No.	FC4A-L03A	1, FC4A-J2A1	FC4A-L03AP1		
Isolation	Between input and power c Between input and internal		ated		
Effect of Improper Input Connection	No damage	No damage			
Maximum Permanent Allowed Overload (No Damage)	13V DC	40 mA	_		
Selection of Analog Input Signal Type	Using programming softwa	Using programming software			
Calibration or Verification to Maintain Rated Accuracy	Impossible				

\*1: The data processed in the analog I/O module can be linear-converted to a value between -32,768 and 32,767. The optional range designation, and analog

I/O data minimum and maximum values can be selected using data registers allocated to analog I/O modules.

\*2: When an error is detected, a corresponding error code is stored to a data register allocated to analog I/O operating status.

\*3: The accuracy of the thermocouple input is not guaranteed when noise is applied.

## Expansion Interface Module Specifications

Type No.		FC5A-EXM1M	FC5A-EXM1S	FC5A-EXM2		
.,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,		(Expansion Interface Master Module)	(Expansion Interface Slave Module)	(Expansion Interface Module)		
Rated Power Voltage		_	24V DC (supplied from external power)	24V DC (supplied from external power)		
Allowable Voltage	Range		20.4 to 26.4V DC (including ripple)	20.4 to 26.4V DC (including ripple)		
Current Draw (Internal Power/External Power)		Internal power (supplied from CPU module): (supplied from CPU module): 90 mA (5V DC) 0 mA (24V DC) 0 mA (24V DC) 0 mA (24V DC) 0 mA (24V DC) 0 mA (26.4V DC) *1		Internal power (supplied from CPU module): 50 mA (5V DC) 0 mA (24V DC) External power: With I/0 modules 750 mA (26.4V DC) *1		
Maximum Power Consumption (External Power) *1		_	19W (26.4V DC)	19W (26.4V DC)		
Allowable Moment	ary Power Interruption	_	10 ms minimum (24V DC)	10 ms minimum (24V DC)		
I/O Expansion		Between CPU module and expansion interface module Connectable CPU modules: FC5A-D16RK1/D16RS1/D32K3/D32S3/D12K1E/D12S1E Connectable I/O modules: 7 maximum Beyond the expansion interface module Connectable I/O modules: 8 digital I/O modules maximum (AC input modules are not applicable) *2				
Maximum I/O Refre	esh Time *3	3.6 ms	2.8 ms			
Communication bet Expansion Interfac	tween CPU Module and e Module	Asynchronous communication (I/O refresh of I/O modules on both sides of the expansion interface module is asynchronous.)				
Isolation from Inter	nal Circuit	Only communication interface part is i		Not isolated		
EMC Compliant Cal	ole Length	1m (FC5A-KX1C)		_		
Power Supply	Connector on Mother Board	_	MKDSN1.5/3-5.08-BK (Phoenix Contact)	MSTB2.5/3-GF-5.08BK (Phoenix Contact)		
Connector	Connector Insertion/Removal Durability	_	_	100 times minimum		
Expansion Cable	Connector on Mother Board	FCN-365P024-AU (Fujitsu Component)	·			
Connector	Connector Insertion/Removal Durability	100 times minimum		-		
Weight		70g	135g	140g		

\*1: Power consumption by the expansion interface module and eight I/O modules.
\*2: The maximum number of relay outputs that can be turned on simultaneously is 54 points.
\*3: Maximum I/O refresh time of the expansion interface module. D8252 stores the refresh time.

## Web Server Unit

#### General Specifications

· delleral Specification	
Type No.	FC4A-SX5ES1E
Rated Power Voltage	24V DC
Allowable Voltage Range	20.4 to 26.4V DC
Current Draw	70 mA
Allowable Momentary Power Interruption	10 ms maximum
Dielectric Strength	500V AC, 1 minute
Insulation Resistance	10 MΩ minimum (500V DC megger)
Noise Resistance	DC power terminal: 1.0 kV, 50 ns to 1 µs Ethernet cable: 0.5 kV, 50 ns to 1 µs (coupling clamp)
Inrush Current	4A maximum
Operating Temperature	0 to 55°C
Storage Temperature	-40 to +70°C (no freezing)
Relative Humidity	10 to 95% (no condensation)
Pollution Degree	2 (IEC 60664-1)
Corrosion Immunity	Free from corrosive gases
Degree of Protection	IP20 (IEC60529)
Vibration Resistance	When mounted on a DIN rail: 5 to 8.4 Hz amplitude 3.5 mm 8.4 to 150 Hz accelaration 9.8 m/s <sup>2</sup> (1G) 2 hours in each of 3 axes
Shock Resistance	147 m/s² (15G), 3 shocks each in 3 axes
Weight (approx.)	150g

• Connectable Devices Programmable Controllers: FC5A, FC4A, FC3A Operator Interfaces: (RS232C communication with PLC through Ethernet) HG2F, HG2S, HG1F

## Instructions

## Basic Instructions

			Oty of Bytes			
Symbol	Function	FC5A Slim Type	FC5A All-in-One Type	FC4A		
AND	Series connection of NO contact	31111 Type	4	4		
AND LOD	Series connection of circuit blocks	4	5	5		
ANDN	Series connection of NC contact	4	4	4		
BPP	Restores the result of bit logical operation which was saved temporarily	4	2	2		
BPS	Saves the result of bit logical operation temporarily	4	5	5		
BRD	Reads the result of bit logical operation which was saved temporarily	4	3	3		
CC=	Equal to comparison of counter current value	10 to 12	7	7		
CC≥	Greater than or equal to comparison of counter current value	10 to 12	7	7		
CDP	Dual pulse reversible counter (0 to 65,535)	12 to 14	4	4		
CDPD	Double-word dual pulse reversible counter (0 to 4,294,967,295)	12 to 14	4			
CNT	Adding counter (0 to 65,535)	12 to 14	4	4		
CNTD	Double-word adding counter (0 to 4,294,967,295)	12 to 14	4	-		
CUD	Up/down selection reversible counter (0 to 65,535)	12 to 14	4	4		
	Double-word up/down selection reversible counter (0 to 4,294,967,295)	12 to 14	4	4		
DC=	Equal to comparison of data register value	12 to 14	8	8		
DC=	Greater than or equal to comparison of data register value	10 to 14	8	8		
END		4	2	2		
JEND	Ends a program	4	4	4		
-	Ends a jump instruction					
JMP	Jumps a designated program area	6	4	4		
LOD	Stores intermediate results and reads contact status	4	6	6		
LODN	Stores intermediate results and reads inverted contact status	4	6	6		
MCR	Ends a master control	4	4	4		
MCS	Starts a master control	4	4	4		
OR	Parallel connection of NO contact	4	4	4		
OR LOD	Parallel connection of circuit blocks	4	5	5		
ORN	Parallel connection of NC contact	4	4	4		
OUT	Outputs the result of bit logical operation	4	6	6		
OUTN	Output the inverted result of bit logical operation	4	6	6		
RST	Resets output, internal relay, or shift register bit	4	6	6		
SET	Sets output, internal relay, or shift register bit	4	6	6		
SFR	Forward shift register	10	6	6		
SFRN	Reverse shift register	10	6	6		
SOTD	Falling-edge differentiation output	4	5	5		
SOTU	Rising-edge differentiation output	4	5	5		
TIM	Subtracting 100-ms timer (0 to 6553.5 sec)	12 to 14	4	4		
TIMO	Subtracting 100-ms off-delay timer (0 to 6553.5 sec)	12 to 14	4	_		
тмн	Subtracting 10-ms timer (0 to 655.35 sec)	12 to 14	4	4		
тмно	Subtracting 10-ms off-delay timer (0 to 655.35 sec)	12 to 14	4	—		
TML	Subtracting 1-sec timer (0 to 65535 sec)	12 to 14	4	4		
TMLO	Subtracting 1-sec off-delay timer (0 to 65535 sec)	12 to 14	4	_		
TMS	Subtracting 1-ms timer (0 to 65.535 sec)	12 to 14	4	4		
TMSO	Subtracting 1-ms off-delay timer (0 to 65.535 sec)	12 to 14	4	_
